Chondrichthyes: Paleozoic Elasmobranchii, Teeth Michal Ginter

AGASSIZ's beautifully illustrated five volume opus «Recherches sur les poissons fossiles» (1833-1844) was the actual beginning for paleoichthyology. He gave, in this publication, the first comprehensive presentation of fossil agnathans and fishes. In the ensuing years, numerous descriptions of forms (mostly from Europe and North America) have been published. These were compiled by A. S. WOODWARD (1889-1901), one of the many excellent paleoichthyologists (from past to present) in Great Britain, in his famous "Catalogue of Fossil Fishes in the British Museum (Natural History)". The catalogue was compiled so well that it is continually used by specialists in paleoichthyology. In Scandinavia after World War I, E. A. STENSIÖ founded an important school for paleoichthyology. He and his followers did extremely detailed investigations, with great emphasis on anatomical interpretations. These brought about strong controversies, between the Scandinavian and the English-American schools, regarding the interpretation of morphological data and the interrelationships of different groups of agnathans and fishes. Even though the Scandinavian school has disappeared, the controversy still exists; and the Russian, German and French paleoichthyologists find themselves having to take sides. Between 1960 and 1970 one synopsis in Russian (OBRUCHEV, D. V. (ed.) 1964: Osnovy paleontologii, vol. 11: Agnatha, Pisces; 1967: Engl. translation), one in French (PIVETEAU, J. (ed.) 1964 to 1969: Traité de Paléontologie, vol. 4: 1, Vertébrés, Agnathes; 2, Gnathostomes, Acanthodiens, Placodermes, Élasmobranches; 3, Actinoptérygiens, Crossoptérygiens, Dipneustes) and a shorter one in German (MÜLLER, A. H. 1966: Lehrbuch der Paläozoologie. Band III. Vertebraten. Teil 1. Fische im weiteren Sinne und Amphibien) were published, representing the whole field of paleontology. Osnovy showed a systematic viewpoint and Traité a morphological-anatomical viewpoint.
