Evolution (Science Foundations) Thom Holmes

Evolution is the process of gradual change that occurs naturally through a combination of inherited changes and adaptation to environmental opportunities. Explored by Charles Darwin in his seminal work *On the Origin of the Species by Means of Natural Selection*, this process takes place in generation after generation of a species. The theory of evolution--that all forms of life on Earth can be traced back to single-celled organisms that arose in the oceans 3.5 billion years ago--is the only scientifically accepted explanation for how this happened. Evolution explains the scientific theory of evolution and its role in the development and continuation of all life.
