The Mathematics of Coordinated Inference: A Study of Generalized Hat Problems (Developments in Mathematics) Christopher S. Hardin, Alan D. Taylor

Two prisoners are told that they will be brought to a room and seated so that each can see the other. Hats will be placed on their heads; each hat is either red or green. The two prisoners must simultaneously submit a guess of their own hat color, and they both go free if at least one of them guesses correctly. While no communication is allowed once the hats have been placed, they will, however, be allowed to have a strategy session before being brought to the room. Is there a strategy ensuring their release? The answer turns out to be yes, and this is the simplest non-trivial example of a “hat problem.”

This book deals with the question of how successfully one can predict the value of an arbitrary function at one or more points of its domain based on some knowledge of its values at other points. Topics range from hat problems that are accessible to everyone willing to think hard, to some advanced topics in set theory and infinitary combinatorics. For example, there is a method of predicting the value $f(a)$ of a function f mapping the reals to the reals, based only on knowledge of f 's values on the open interval $(a - 1, a)$, and for every such function the prediction is incorrect only on a countable set that is nowhere dense.

The monograph progresses from topics requiring fewer prerequisites to those requiring more, with most of the text being accessible to any graduate student in mathematics. The broad range of readership includes researchers, postdocs, and graduate students in the fields of set theory, mathematical logic, and combinatorics. The hope is that this book will bring together mathematicians from different areas to think about set theory via a very broad array of coordinated inference problems.

From reader reviews:

Dianne Tripp:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each guide has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their the perfect time to read a book. These are reading whatever they get because their hobby is actually reading a book. What about the person who don't like reading a book? Sometime, individual feel need book if they found difficult problem as well as exercise. Well, probably you should have this The Mathematics of Coordinated Inference: A Study of Generalized Hat Problems (Developments in Mathematics).

Melinda Gregory:

What do you regarding book? It is not important to you? Or just adding material when you really need something to explain what the one you have problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to perform others business, it is give you a sense of feeling bored faster. And you have time? What did you do? Everybody has many questions above. They should answer that question mainly because just their can do in which. It said that about publication. Book is familiar on every person. Yes, it is proper. Because start from on kindergarten until university need this kind of The Mathematics of Coordinated Inference: A Study of Generalized Hat Problems (Developments in Mathematics) to read.

Michael Vogel:

In this 21st one hundred year, people become competitive in every way. By being competitive currently, people have do something to make these survives, being in the middle of the crowded place and notice simply by surrounding. One thing that occasionally many people have underestimated the item for a while is reading. Yes, by reading a publication your ability to survive increase then having chance to stay than other is high. For you who want to start reading the book, we give you this kind of The Mathematics of Coordinated Inference: A Study of Generalized Hat Problems (Developments in Mathematics) book as starter and daily reading publication. Why, because this book is usually more than just a book.

Joseph Mitchell:

A lot of people always spent their own free time to vacation or perhaps go to the outside with them loved ones or their friend. Do you know? Many a lot of people spent many people free time just watching TV, or even playing video games all day long. If you need to try to find a new activity honestly, that is look different you can read a new book. It is really fun to suit your needs. If you enjoy the book that you simply read you can spent 24 hours a day to reading a reserve. The book The Mathematics of Coordinated Inference: A Study of Generalized Hat Problems (Developments in Mathematics) it doesn't matter what good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. When

you did not have enough space to deliver this book you can buy the e-book. You can more simply to read this book from a smart phone. The price is not to cover but this book features high quality.
