Web Security for Network and System Administrators David Mackey

Web Security, for Network and System Administrators is designed to educate users in the technologies, terms, and processes related to Internet security. Divided into four distinct parts, this text will teach individuals about the concepts and techniques related to general security, network security, operating system security, and methods for testing security. Both UNIX and Microsoft Windows operating systems are covered, providing a broad range of information essential for every Web professional. Throughout the book the reader sees security-related issues through the eyes of a fictitious IT staff, demonstrating the kind of real-world situations that security professionals experience in the workplace. In addition, readers may use this text to prepare for the CIW Security Professional exam.
