# Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences)

Taylor Arnold, Lauren Tilton

## Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) Taylor Arnold, Lauren Tilton

This pioneering book teaches readers to use R within four core analytical areas applicable to the Humanities: networks, text, geospatial data, and images. This book is also designed to be a bridge: between quantitative and qualitative methods, individual and collaborative work, and the humanities and social sciences. *Humanities Data with R* does not presuppose background programming experience. Early chapters take readers from R set-up to exploratory data analysis (continuous and categorical data, multivariate analysis, and advanced graphics with emphasis on aesthetics and facility). Following this, networks, geospatial data, image data, natural language processing and text analysis each have a dedicated chapter. Each chapter is grounded in examples to move readers beyond the intimidation of adding new tools to their research. Everything is hands-on: networks are explained using U.S. Supreme Court opinions, and low-level NLP methods are applied to short stories by Sir Arthur Conan Doyle. After working through these examples with the provided data, code and book website, readers are prepared to apply new methods to their own work. The open source R programming language, with its myriad packages and popularity within the sciences and social sciences, is particularly well-suited to working with humanities data. R packages are also highlighted in an appendix. This book uses an expanded conception of the forms data may take and the information it represents. The methodology will have wide application in classrooms and self-study for the humanities, but also for use in linguistics, anthropology, and political science. Outside the classroom, this intersection of humanities and computing is particularly relevant for research and new modes of dissemination across archives, museums and libraries. ?

**From reader reviews:**

**Steven Tran:**

Reading a book tends to be new life style with this era globalization. With reading you can get a lot of information that can give you benefit in your life. Using book everyone in this world can easily share their idea. Books can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the storyline that share in the books. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors these days always try to improve their skill in writing, they also doing some analysis before they write with their book. One of them is this Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences).

**Kathleen Edwards:**

This Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) is great book for you because the content which is full of information for you who also always deal with world and have to make decision every minute. This particular book reveal it data accurately using great manage word or we can declare no rambling sentences inside. So if you are read the idea hurriedly you can have whole info in it. Doesn't mean it only offers you straight forward sentences but tough core information with beautiful delivering sentences. Having Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) in your hand like finding the world in your arm, info in it is not ridiculous a single. We can say that no book that offer you world throughout ten or fifteen tiny right but this e-book already do that. So , this really is good reading book. Hi Mr. and Mrs. occupied do you still doubt this?

**Jenny Perez:**

That book can make you to feel relax. This book Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) was colourful and of course has pictures on the website. As we know that book Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) has many kinds or category. Start from kids until teenagers. For example Naruto or Private investigator Conan you can read and think that you are the character on there. Therefore , not at all of book are generally make you bored, any it can make you feel happy, fun and rest. Try to choose the best book for you personally and try to like reading which.

**Debra Espiritu:**

Some individuals said that they feel fed up when they reading a publication. They are directly felt the idea

when they get a half parts of the book. You can choose the actual book Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) to make your current reading is interesting. Your own skill of reading proficiency is developing when you similar to reading. Try to choose basic book to make you enjoy you just read it and mingle the sensation about book and reading especially. It is to be first opinion for you to like to wide open a book and examine it. Beside that the reserve Humanities Data in R: Exploring Networks, Geospatial Data, Images, and Text (Quantitative Methods in the Humanities and Social Sciences) can to be your new friend when you're feel alone and confuse using what must you're doing of the time.
