Why It's Not Carbon Dioxide After All Douglas J Cotton

Climate Change is not caused by any Greenhouse Effect. This book explains the basics of thermodynamic physics in a way that will help you understand how the world has been so seriously misled into believing carbon dioxide is to blame for the observed global warming. The author presents a sound argument and outline of the "heat creep" process which is what must be supporting surface temperatures on Earth and other planets and he highlights the serious errors in the greenhouse conjecture. This is a "must read" book for anyone who is concerned that mankind is causing the world to warm. It explains natural climate cycles and predicts future global cooling.
